

Supplemental Fig.1: Characterization of intrarenal Tregs

T_{regs} from FIR/TIGER mice on day 7 after cGN induction in kidneys **(A)** and spleen **(B)** were stained for CD4⁺ and RFP⁺ indicating Foxp3⁺ cells by flow cytometry. Additional surface stainings for Neuropilin, ICOS, CCR6, LAG3 and IL-10R and intracellular staining for Helios were performed and depicted as histograms. The gray histogram indicates the isotype staining control.
