Weaver RG, James MT, Ravani P, Weaver CG, Lamb EJ, Tonelli M, Manns BJ, Quinn RR, Jun M, Hemmelgarn BR: Estimating Urine Albumin-to-Creatinine Ratio from Protein-to-Creatinine Ratio: Development of Equations using Same-Day Measurements. *J Am Soc Nephrol* 31: 591–601, 2020.

After publication of the above-noted manuscript, it came to our attention that there was a typographic error in Table 3, which provides the equations to estimate the log of the albumin-creatinine ratio (log[ACR]) from the protein-creatinine ratio (PCR). In the equation for the 25th percentile of log(ACR) for a PCR ≥1000 mg/g, the first coefficient should be 0.0867, rather than −0.0867. The correct version of Table 3 is shown below.

The authors sincerely apologize for any inconvenience this may have caused.

Table 3. Equations to estimate the median and 25th and 75th percentiles of ACR from a PCR measurement, based on quantile regression models for log(ACR) containing only the linear spline terms for log(PCR)

Range of PCR (mg/g)	Equation to Estimate Median log(ACR)	Equation to Estimate 25th Percentile log(ACR)	Equation to Estimate 75th Percentile log(ACR)
PCR <40	0.9518+0.1264×log(PCR)	0.5528+0.1297×log(PCR)	1.4520+0.1074×log(PCR)
PCR 40 to <60	−1.2568+0.7251×log(PCR)	−0.1416+0.3179×log(PCR)	−3.7193+1.5092×log(PCR)
PCR 60 to <250	−6.7837+2.0751×log(PCR)	−6.2467+1.8092×log(PCR)	−4.9571+1.8116×log(PCR)
PCR 250 to <1000	−2.9649+1.3834×log(PCR)	−7.1833+1.9788×log(PCR)	−1.4477+1.1760×log(PCR)
PCR ≥1000	−0.0239+0.9577×log(PCR)	0.0867+0.9264×log(PCR)	−0.1902+0.9939×log(PCR)

Log refers to the natural logarithm, so ACR=exp(log[ACR])=$2.71828^{\log(ACR)}$. Median-predicted ACR=exp(median of predicted log[ACR]). ACR and PCR are in mg/g.
